## < Summary />

Software developer with a problem-solving mindset. I have 8 months industry experience in building cross-platform mobile app using React-Native and web apps using MERN stack. Proficiency working in agile environments to implement feature request within a strict deadline. I diversified my soft skills working in stores, gigs, and other part time jobs.

## < Work Experience />

### Store Clerk & Cashier

AUG 2022 - PRESENT

Safeway Liquor Store, Burquitlam BC

- Working as a cashier to sell alcohol and lottery tickets to customers by following all the necessary checks and policies
- Familiarising with hundreds of different alcohol products, their origin and characteristics by stocking and shelving them to their designated shelves

### Software Developer & QA

SEP 2021 - APR 2022

Pangenomic Health Corp., Burnaby BC

- Performed regression testing, functional/non-functional testing, and wrote units tests using Junit for RESTful API endpoints for the backend. Documented everything in a maintained test plan.
- Worked on the frontend using React-Native to build cross-platform app that curated a list of natural remedy options to its customers in the feed screen, alongside by many other features
- Transitioned to working as a Full-Stack developer to implement new features based on user feedback using technologies such as Nodejs for the backend, MySQL database, docker etc.
- Developed strong communication skill and professionalism working alongside QA team and design team, using tools such as JIRA, Slack & Bitbucket to streamline the development lifecycle

## < PERSONAL PROJECTS />

### DiscordBot-Vibecheck.js

JAN 2021 – ONGOING

- Built a multipurpose discord bot using NodeJS hosted on Heroku, which assigns a score based on users' response time for active engagement. Data saved on NoSQL Firebase Database
- Bot fetches soccer data using asynchronous API calls from an external server and posts formatted fixtures and league table standings on discord channels to lookup time on the internet

### DX-BallLite.js

SEPT 2019 - FEB 2020

- Built a light-weight DX-Ball game using JavaScript and CSS on HTML canvas and hosted it on GitHub for playing on any browser
- Game structure follows UI and Logic separation using Object-Oriented Programming for security and readability
